

Senior Solutions Architect

If you haven't heard the name Privacy Analytics before then don't worry. By the end of these paragraphs you won't forget us. We're a company on the cutting edge of healthcare innovation, working with some of the largest health analytics businesses in the world utilizing health data to help find cures for today's biggest diseases, including Cancer, Heart Disease and HIV.

Headquartered downtown in the heart of the National Capital region and with an office in the Toronto area, we are literally a one-of-kind health data analytics company, as the first and only de-identification software provider in the world. Privacy Analytics is on the cutting edge of data de-identification and re-identification research and we have translated this patented research into an amazing offering of products and services that are being used to allow researchers to access healthcare data for analysis while ensuring individual identities are protected.

Even though our customers include 7 of the top 10 Fortune 500 healthcare organizations, we've remained loyal to the entrepreneurial and innovate spirit that founded the company continues to permeate our office and culture. A career at Privacy Analytics means you'll be making a difference in 21st century healthcare. It means having the opportunity to work to your full potential surrounded by the best and brightest people. It's a place where you can be proud of the work that you do.

So, if you're ready for the next stage of your career and you are ready to contribute to a fast growing start-up helping change Healthcare, then we're waiting to hear from you!

Career Opportunity - Senior Solutions Architect

Our Professional Services team is hiring a Senior Solutions Architect to deliver anonymization projects and training to our clients. Working remotely and at client locations, the Solutions Architect is skilled at developing strategy and communicating technical details clearly and concisely to a variety of stakeholders. This role is critical to our on-going effort to support our clients seeking to anonymize (de-identify) their data using our software and methodology.

Responsibilities:

- Implement anonymization solutions using Privacy Analytics' software solutions and customized application code
- Deliver training to customers on our software, solutions and methodology
- Support the creation and maintenance of Implementation Guidelines documentation
- Develop expertise in our software, solutions and methodology, and in re-identification risk assessment and risk management
- Develop and maintain knowledge and awareness related to privacy regulations and de-identification standards across North America and globally (e.g., HIPAA)
- Collaborate with Marketing and Sales in the development of demonstrations, workshops and white papers

Qualifications:

- Degree in Computer Science, Engineering, Mathematics or a related field
- 7+ years' consulting and/or project implementation experience
- Strong computer programming skills (C#, JavaScript, SQL)
- Experience working with health, financial, or marketing data
- Ability to communicate technical details, requirements and strategy to customers and senior leadership
- Driven, self-directed, and prone to take initiative
- Strong decision-making and problem-solving skills
- Excellent verbal and written communication skills
- Exposure to data migration (Extract/Transform/Load) is an asset
- Knowledge of health data privacy regulations is an asset
